PROACTIVE RISK MANAGEMENT INC.

“ENVISIONING the future, ENGAGING change, and ENABLING you to THRIVE”

- Benoit Grenier, CEO Proactive Risk Management Inc.

PARM8020

PROACTIVE RISK MANAGEMENT INC.

Proactive Risk Management Inc. (PARM) is a leading multinational provider of risk management and security services. By taking a global and integrated approach to risk management and by recruiting the security industry's top talent, PARM has been able to provide an unmatched level of service based on four interconnected pillars: business intelligence, incident management, loss prevention & security services, and technology / tradecraft innovations.

Our 80-20 mindset, inspired by the Pareto principle, ensures that our actions are targeted and efficient, identifying and engaging the 20% of risks that cause 80% of damages, all the while protecting the most critical nodes of our clients' organizations.

- Elaborate a risk mitigation and loss prevention strategy tailor-made to our clients' needs - Provide counsel, implement innovative initiatives, and create value for our clients' organizations.
- Provide the highest level of service to our clients through a transversal integration of the security function.
- Leadership, Innovation, Collaboration, Integrity.

What is the overall capacity of your organization to identify, analyze, and take coordinated action in response to risk-related events?

PILLAR 1

BUSINESS INTELLIGENCE

Our Business Intelligence services aim to proactively identify emerging trends, risks, and threats, which allows us to efficiently advise C-level executives on a strategic level.

We are able to provide our clients with an unmatched level of information, awareness, and counsel by conducting on-site & environmental risk assessments, audits and compliance verifications, undercover operations, and background checks. We combine this with incident management data and state-of-the-art cyber security, intelligence, and reconnaissance technology.

Furthermore, our data visualization tools make it possible to elegantly present and interact with complex datasets, making the detection of patterns and anomalies a simple, intuitive process.

- Proactive Identification of Emerging Threats, Trends, Risks and Opportunities
- Undercover Operations & Background Checks
- Global Risk Predictions and Strategic C-Level Executive
- Visualization and Interaction with Complex Datasets
- Cyber Intelligence & Reconnaissance

PILLAR 3

LOSS PREVENTION & SECURITY SERVICES MANAGEMENT

Our Loss Prevention & Security Services Management services aim to maximize our clients' return on investment, bring operational & process enhancements, and support their corporate image by expertly making the security function an integral part of their operations.

Whether it's by combining technological and human-driven initiatives in punctual "intensive care" operations, by developing efficient loss prevention & security operating procedures or by providing a service of outsourced security, investigation, and post-alarm event management, our solutions are aimed at the continued viability of our clients' organizations.

For more personal, high-level, and discreet security needs we also provide executive protection services under our Risk Management Protective Services banner. Discreet and professional, our executive protection services are based on thorough risk assessments, rigorous advance work, and advanced operational capabilities, ensuring that all angles are covered.

- Loss Prevention / Shrink Reduction: Support, Counsel, Outsourcing
- Post-Alarm Event Management
- Security & Investigation Management
- Executive Protection & Security Detail
- Executive Protection Training & International Coverage
- Transversal Integration of the Security Function

FOUR PARM PILLARS

Solutions, Innovations, and Logistics
to Stay Ahead of the Wave:
A Multidimensional 80-20 Approach

PILLAR 2

INCIDENT MANAGEMENT

Our Incident Management services aim to mitigate our clients' exposure to liabilities, damages, and losses by using an approach based on problem solving and proactive customer outreach. Our team of highly trained incident management specialists manages all incidents, complaints, and problematic situations from the moment they are reported until their resolution, effectively preventing potentially negative developments and claims from materializing.

Our detailed and comprehensive data gathering system ensures that every step of the problem solving process is documented, which guarantees appropriate incident follow-up and evidence of the actions taken.

Moreover, the centralization of all of the incident-related data translates into efficient reporting capacities to keep our clients informed of the issues their business may be facing, a valuable asset for multi-location organizations. By outsourcing their incident management needs to us, our clients know that all disturbances and impediments to operations will be expertly taken care of, allowing them to focus on what really matters, developing their business:

- Outsourced Incident Management Services
- Proactive Customer Outreach and Problem-Solving
- Centralized Data Management & Post-Incident Reporting
- Dedicated Emergency Hotline - 24/7 Response Team
- Confidential Whistleblower / HR Support Line

PILLAR 4

TECHNOLOGY / TRADECRAFT INNOVATIONS

By joining forces with the industry's leading innovators and pioneers, we are able to provide our clients with the ability to benefit from the latest Technology and Tradecraft Innovations. Supporting and enhancing all three other pillars, our work with technology and tradecraft innovations ensures that we stay ahead in a leading role. Our capabilities include:

- Sophisticated HUMINT/Cyber intelligence tools that give us unmatched access to terabytes of otherwise inaccessible information
- Cutting-edge cyber-defense technology
- Multi-dimensional data aggregation and analysis tools
- Quantum-inspired algorithms integrated with behavior intent models have resulted in a reliable, trustworthy analytical solution with empirically validated signatures that support a new framework for human-centric computing. This ground-breaking analysis capability gives us forensic and predictive analysis, including indicators of veracity, deception, and credibility
