

## TACTICAL THREAT ASSESSMENT AND MANAGEMENT COURSE

PROACTIVE RISK MANAGEMENT

PARM

Assessing threats before they happen is an important skillset. Are you ready?

Assessing threats before they happen is an important skillset for security professionals in any venue, from international special events to building and facilities management. Properly assessing and managing those threats could mean the difference between life and death for many.

ProActive Risk Management (PARM) offers a number of groundbreaking and revolutionary workshops that combine the latest in scientific research on threat analysis and management from the perspective of human behavioral signatures of malintent and deception that can add enormous value to any security professional or system. Our workshops are relevant to all security personnel involved in perimeter and checkpoint security, active engagement with potential threats, and the identification of signs of imminent assault and aggression.

Powered by Humintell, our workshops leverage the latest, state-of-the-art scientific research on the behavioral indicators of threats, malicious intent, and deception. Our trainings are unique in that they provide trainees the latest information about valid and reliable behavioral indicators concerning bad actors who are operational, i.e., currently engaged in conducting an act of violence, and actors with malintent who need to deceive operational security personnel about their intent to commit an act of malfeasance. This one-of-a-kind content is powered by the latest research on these topics funded by the Department of Homeland Security, Department of Defense, and the Federal Bureau of Investigation. This research includes Humintell's latest studies of operational terrorists' mindsets – the cognitions, emotions, and behaviors of bad actors when they're actively engaged in an act of violence.

Our techniques involve not only the observation of behavioral cues, but also conversational and brief interview strategies that amplify the production of such cues. Humintell is the only organization in the world that has published science concerning these behavioral cues, especially with regard to deception and malicious, future intent.

Participants also learn the unique facial expressions associated with imminent aggression using a proprietary training tool based on cutting edge research in this area. This tool is also based on unique studies that have isolated a specific set of facial expressions reliably associated with imminent aggression.

All of PARM's techniques are based on behavioral indicators proven to be applicable across cultures and languages. Upon request, the training also encompasses physical perimeter security reviews, as well as active shooter response training.

- **Learn about behavioral indicators of malintent and deception based on state-of-the-art scientific research**
- **Focus on valid and reliable indicators proven by science and informed by fieldwork**
- **Learn not only to assess, but also mitigate threats and reduce risks**
- **Applicable across cultures, countries, and languages**
- **Ideal for all security personnel**
